# Azure

# Azure Ecosystem

Accounts and  
Subscriptions

Portal

Marketplace

APIs and CLIs

Resource  
Manager

Regions and  
Datacenters

Monitor

SLA,  
Compliance, and  
Trust

The background of the image is a dark, stormy sky filled with bright, jagged lightning bolts in shades of blue and white. The lightning strikes are scattered across the frame, creating a sense of dynamic energy and power.

# Azure SQL

# Azure SQL

## SQL Server on Azure Virtual Machines

---

Best for re-hosting and apps  
requiring OS-level access and  
control

Automated manageability  
features and OS-level access

Infrastructure as a Service

# Azure SQL

## SQL Server on Azure Virtual Machines

---

Best for re-hosting and apps  
requiring OS-level access and  
control

Automated manageability  
features and OS-level access

Infrastructure as a Service

## Azure SQL Managed Instance

---

Best for modernizing existing  
apps

Offers high compatibility with  
SQL Server and native VNET  
support

Platform as a Service

support

Platform as a Service

## Azure SQL Database

---

Best for building new apps in the  
cloud

Pre-provisioned or serverless  
compute and Hyperscale storage  
to meet demanding workload  
requirements

# Let me show you...

Azure SQL – Portal Deployment

# IaaS vs PaaS

Business continuity

High availability

Automated backups

Long term backup retention

Geo-replication

Scale

Advanced security

Version-less

Built-in monitoring

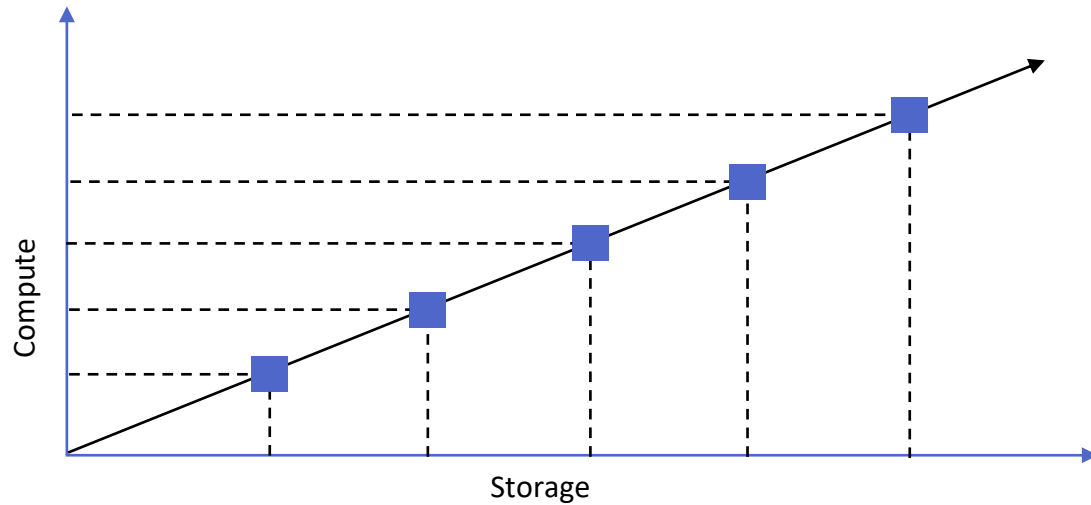

Built-in intelligence

# Purchasing models - SQL Database

## DTU model

Simple, preconfigured

Pre-packaged, bundled unit that represents the database power  
Designed for predictable performance, but somewhat inflexible and limited in options  
DTU sizing offers simplicity of choice

## vCore model

Independent scalability

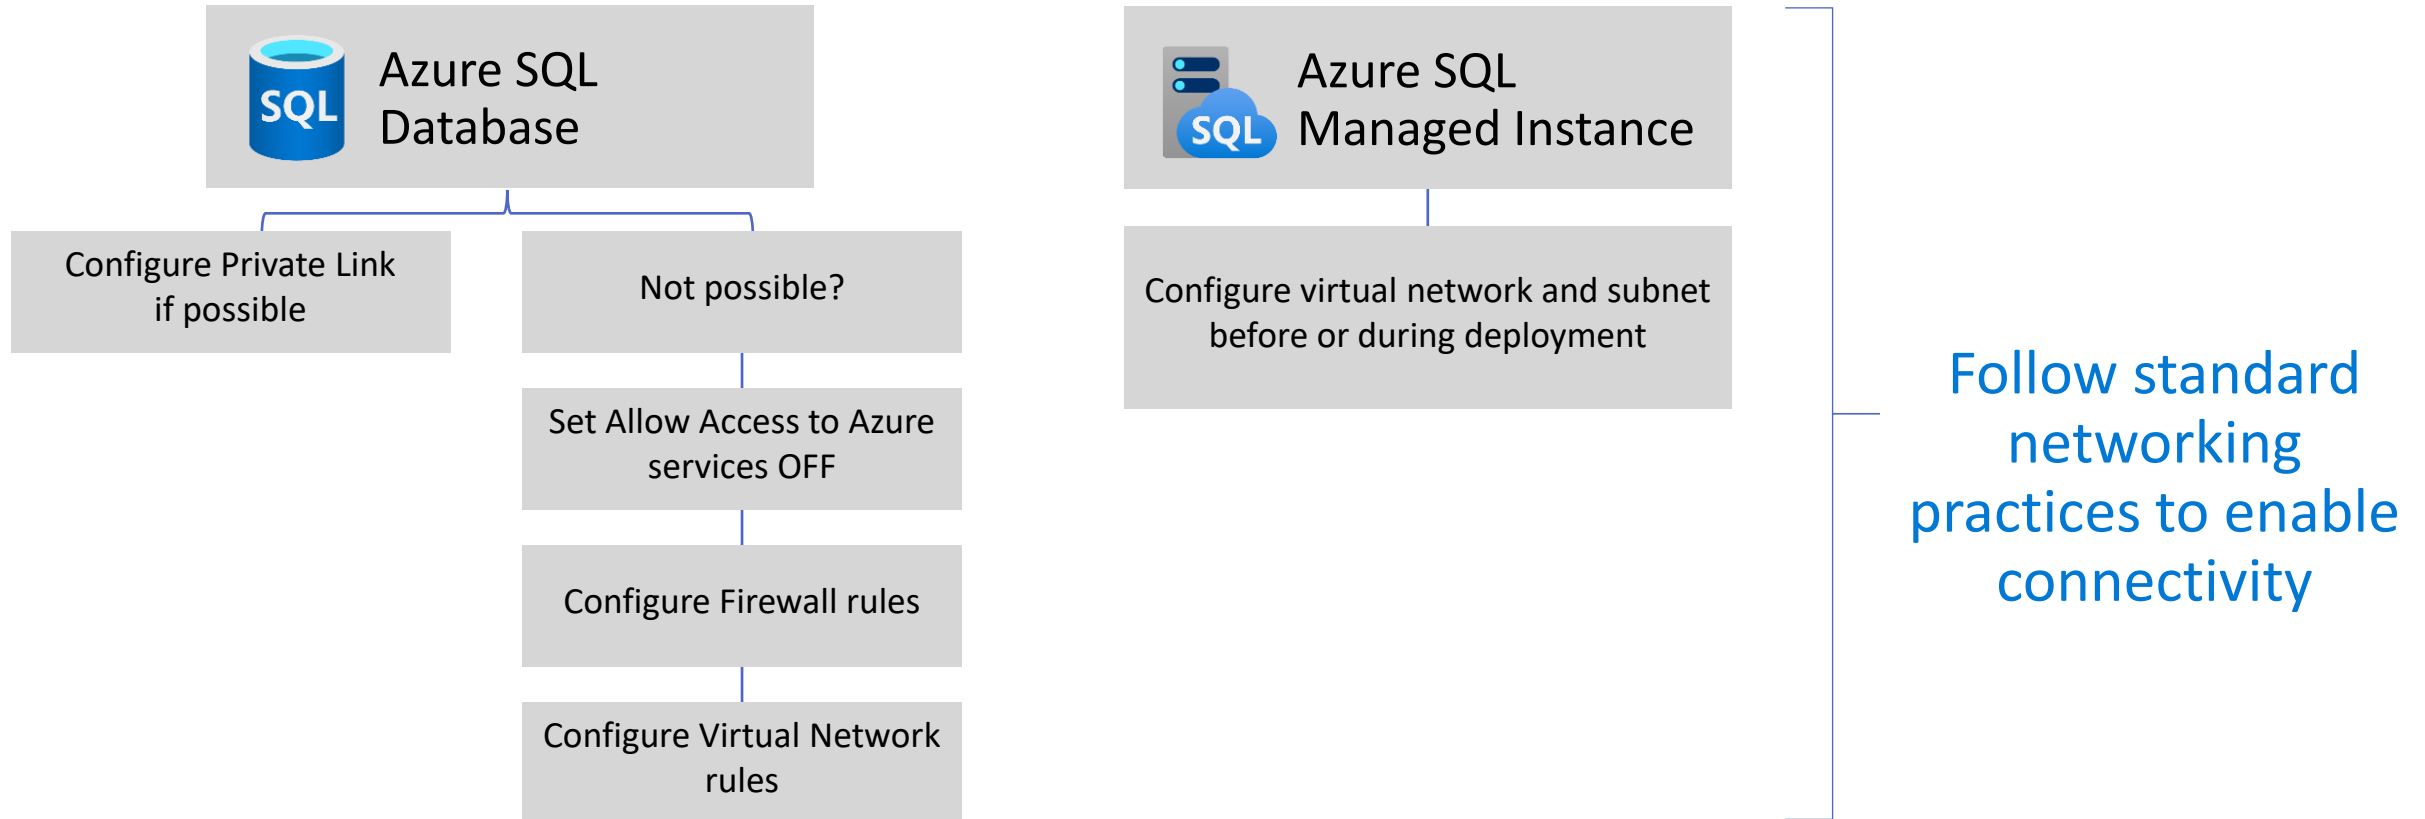

This model allows you to independently choose compute and storage resources. It also allows you to use Azure Hybrid Benefit for SQL Server and Reserved Capacity to gain cost savings.  
Best for customers who value flexibility, control and transparency

The background of the slide is a dark, stormy sky filled with bright, jagged lightning bolts in shades of blue and white. The lightning bolts are scattered across the frame, with some being more prominent than others. The overall effect is one of intense energy and power.

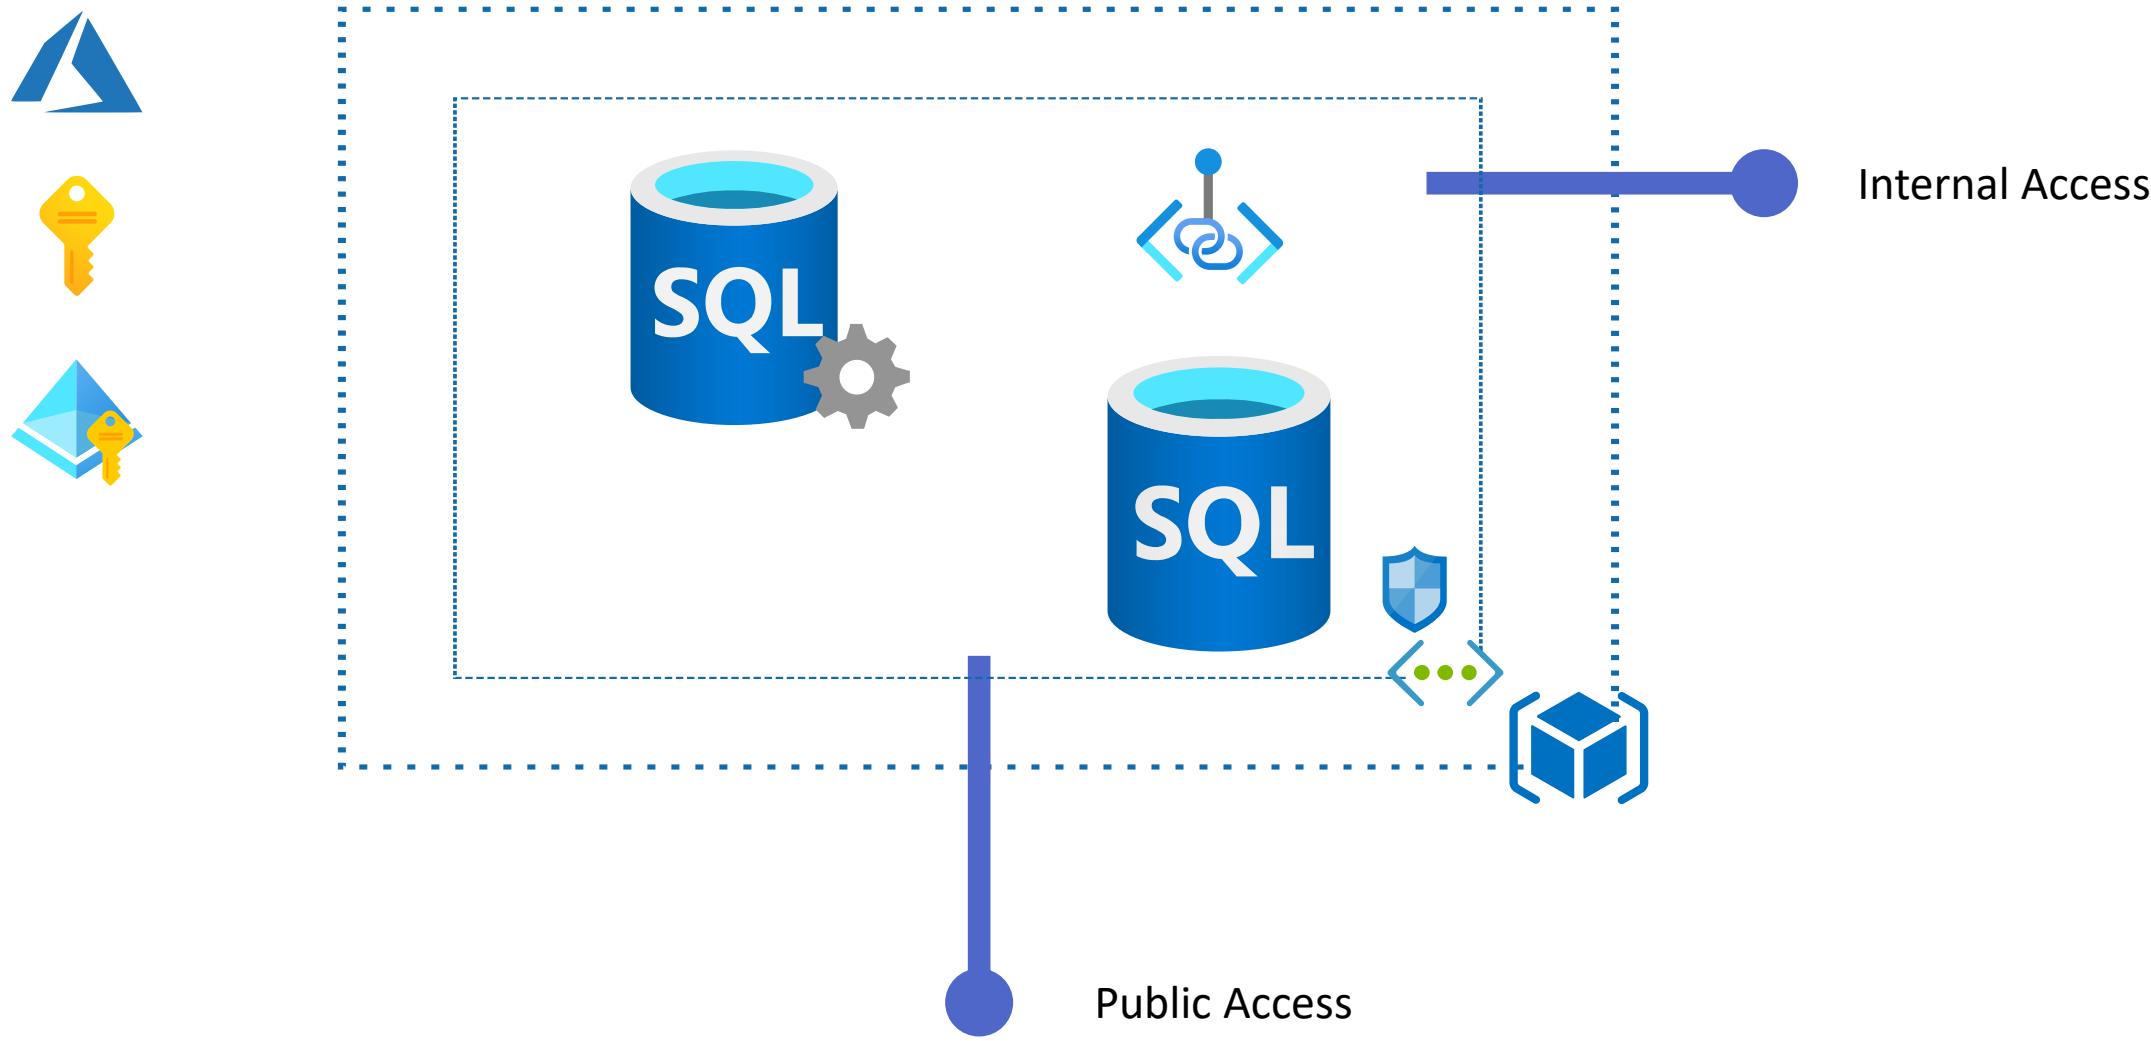

# Differences

# Setup and configure network security

# Networks / Connections

# Security capabilities and tasks

## Security capabilities

- Active Directory Authentication
- Azure RBAC and locks
- Auditing
- Data encryption
- Dynamic Data Masking
- Advanced Data Security

## Security tasks

- Setup and configure network Security
- Setup and configure data protection
- Setup and configure authentication and authorization
- Monitoring security

# Monitoring and Troubleshooting Performance

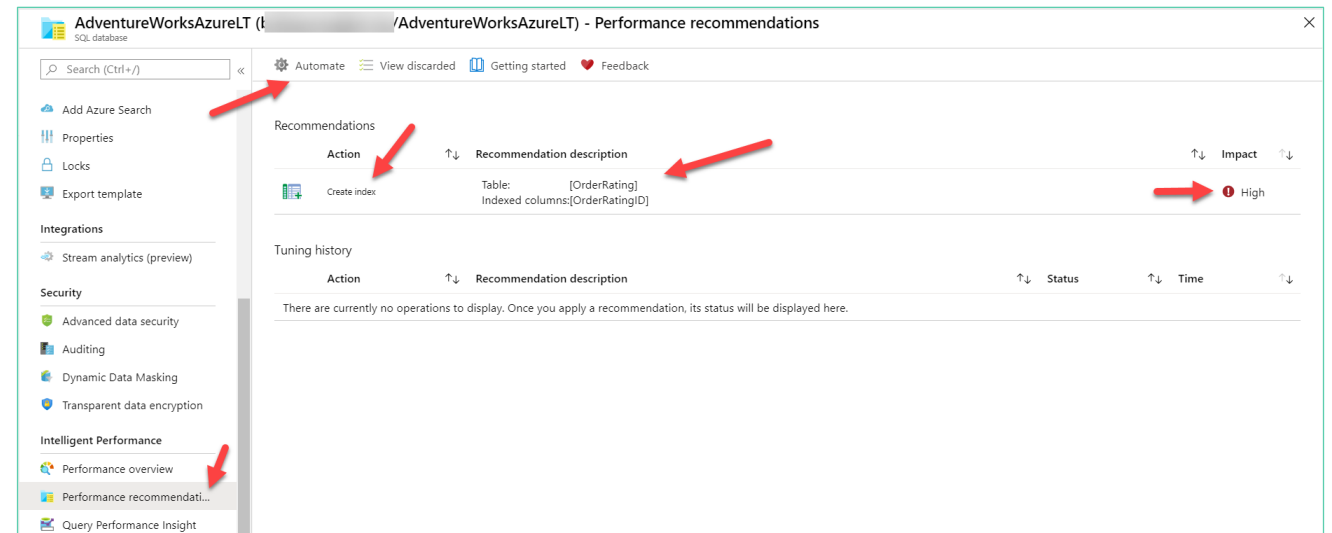

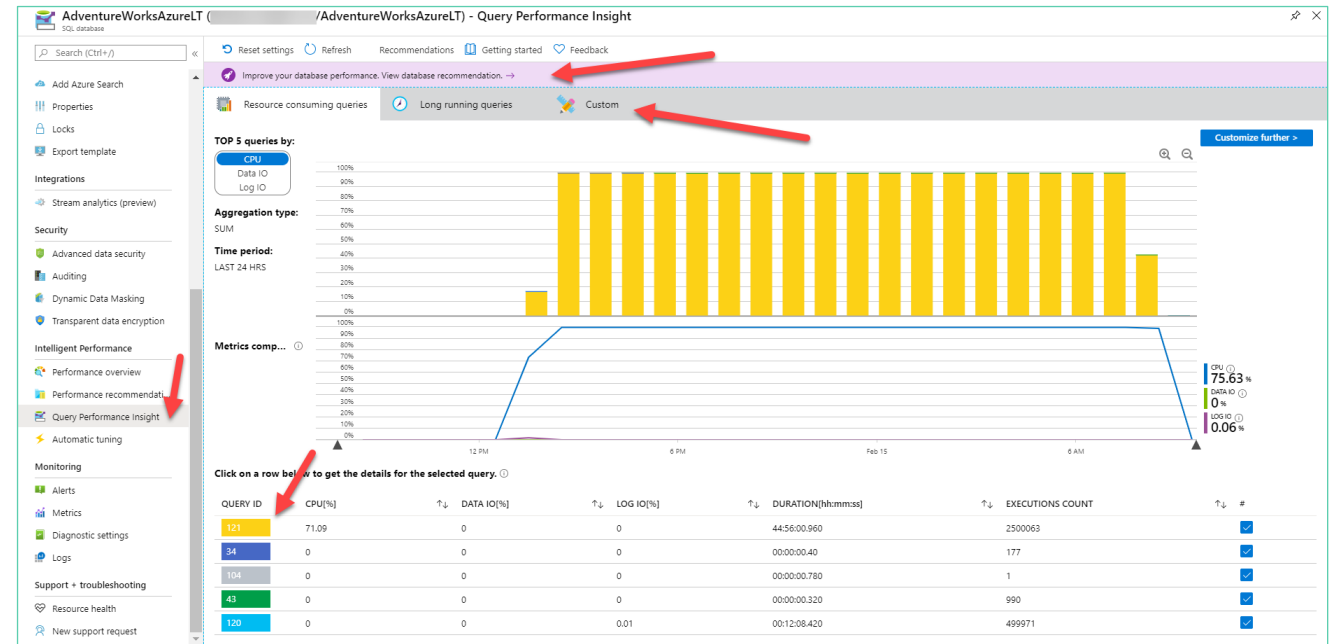

- Azure Monitor Metrics, Alerts, and Logs
- Dynamic Management Views
- Extended Events
- Lightweight Query Profiling on by default
- Query Plan Debugging with SET statements
- Query Store on by default
- Performance Visualizations in portal

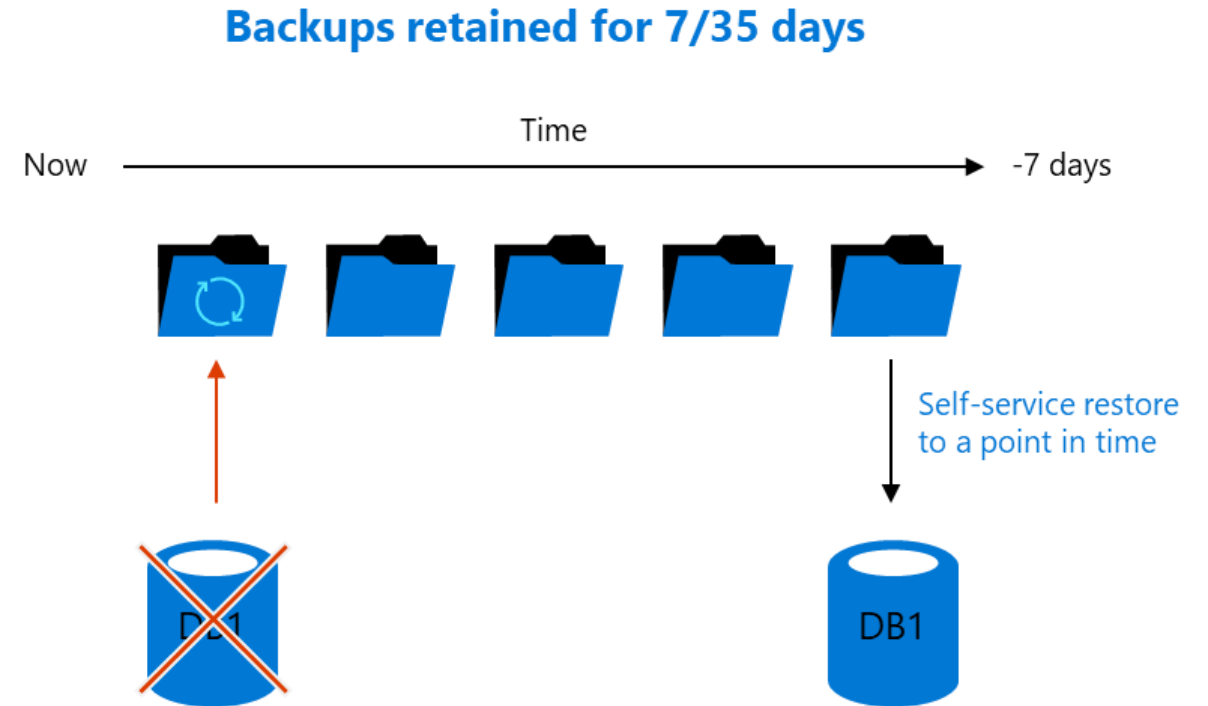

# Automatic Tuning with Azure SQL Database

- Index Recommendations
- ML approach based on DMVs and Query Store
- Parameterized Query Recommendations
- View in DMVs and Azure Portal

# Backup and restore

- Auto backups and Point in Time Restore (PITR)
  - Full Database backup once a week
  - Log Backups every 5-10 minutes
  - Differential Backups every 12 hours
  - Backup files on Azure storage with RA-GRS replicated
  - Backup Integrity checks
  - Restore to new database
  - Long-term retention (up to 10 years) of backups
  - Geo-restore of databases if primary region down
  - Restore backups of deleted databases
- Manual COPY\_ONLY Backup/Restore with Managed Instance

# PowerShell

# Let me show you...

It is really just a SQL Server

**Nothing special  
No Differences**

**It's just a  
SQL Server ;-)**
